Art Unit: 2872

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-12, drawn to an integrated actuator meniscus mirror comprising an optical substrate including a mirror surface on one side and a support structure on the other and a plurality of actuators for applying bending moments to said mirror surface, classified in class 359, subclass 849.
  - II. Claim 13, drawn to an integrated actuator meniscus mirror comprising surface for controlling altering the shape of said mirror surface without a reaction mass, classified in class 359, subclass 848.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because of the omission that the mirror includes a surface for controlling altering the shape of said mirror surface without a reaction mass. The subcombination has separate utility such as an integrated actuator meniscus mirror without a support structure and/or a plurality of actuators.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification or because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
